

Preprocessing	1	<code>tRNAGetMatrix(data, assay, confidence_set, name_sep, tRNA_name_map, flanking_region)</code>
	2	<code>tRNASetgenes(data, tRNA_bed, flanking_region)</code>
	3	<code>tRNASetCutoff(data, num_iter, cutoffs, generate_plot, slope_threshold, p_threshold)</code>
	4	<code>tRNAFiltercuts(data, cutoff)</code>
Format	1	<code>groupConditions(data, group.labels)</code>
	2	<code>mergeMatrices(mat1, mat2, mat3)</code>
Core algorithm	1	<code>createObject(counts, assay, meta.data, meta.data.ids)</code>
	2	<code>updateObject(object, counts, assay, main_name)</code>
	3	<code>computeCodonUsage(object, codon_freq, corr_method, additional.metrics)</code>
	4	<code>computeAAUsage(object, level)</code>
	5	<code>computeTheoreticaltTE(object, level, compute.significance)</code>
Codon frequencies	1	<code>getCodonFreq(dataset_name, genes_file, transcripts, filter, retain.mitochondrial)</code>
	2	<code>extractCodons(sequences)</code>
	3	<code>computeMeanUsage(data, assay, mode, metadata, corr_factor)</code>
	4	<code>computeExonicBackground(data)</code>
	5	<code>computeCorrelationBackground(mean, background, corr_method)</code>
	6	<code>getPermutationDist(n_permut, n_features, target_data, codon_freq)</code>
	7	<code>obtainSignificance(dist, value)</code>
Visualization module	1	<code>plotTEScores(data, metadata, add_stats, show_outliers)</code>
	2	<code>plotCorrelation(data, plot, x_axis_col, y_axis_col, extra_val)</code>
	3	<code>plotDistribution(data, plot, x_axis_col, y_axis_col)</code>
	4	<code>plotProportion(data, plot, var_numerical, var_categorical, num_limits, num_rings, order, normalize, zoom)</code>
	5	<code>plotPermutation(permut_data, sig_data)</code>
Abundance	1	<code>runDEAnalysis(...)</code>
	2	<code>computeDEResults(list_data, metadata, target_factor, corr_factor, ref_level, reduce)</code>
	3	<code>plotDEResults(DE_results_list, dataset_name, dim_reduct, fc_threshold, pval_threshold, sig_axis, heatmap, target_factor)</code>
